Pedal Beam Change

8-CT + E-CT + S-CT + S-TBT

We have made a change to the design of the pedal beam assemblies on our 8, E & S Series Cross-Trainers. While the original version was a one-piece beam, Gen. 2 added an additional joint so that the pedal and pedal beam could move independently. Additional changes were done to improve quality and reliability resulting in the Gen. 3 beam. The Gen. 3 pedal beams are backwards compatible with any 9-4060, 9-6040, 9-6080, and 9-6140 Cross Trainers.

The Gen. 3 pedal beams were introduced on the following units by serial number:

S-CT: CTSX1712-L01124

8-CT: CT6140-L17500100

Gen. 1

Gen. 2+3

Please note that ONLY the Gen. 3 beam assemblies are available.

The Gen. 3 Pedal Beams are only available as an assembly due to the very specific torque values needed for them to function properly. The pedal pads are still available separately.

Left Pedal Beam Assembly: 740-9286-XX-KT

Right Pedal Beam Assembly: 740-9290-XX-KT

Please note that the "XX" denotes the color of the part. For color codes, please see doc [#637-4206](#)

Complete left or right pedal beam assemblies can be different generations but the two pieces that make up the pedal assembly (pedal and pedal linkage arm) must be the same generation.
